Manuel Caneira, MD, PhD

COURSE PRESENTATION

This course encompasses experts from Ophthalmology, Plastic and Reconstructive Surgery, and Dermatology, with the purpose of offering participants a systematic and hands-on understanding of periocular oncology, anatomy, and the primary surgical techniques pertinent to this field. The course emphasizes guiding clinical thought processes of diagnosis and treatment of malignant tumours, the selection algorithm for each technique, and practical tips for circumventing complications.

This will be a **2-day course**:

Day 1: Theoretical presentations on the diagnosis and therapeutic approach in periocular oncology, surgical anatomy, techniques of reconstruction and non-surgical treatments.

Day 2: A practical, hands-on experience with various techniques of reconstruction on cadavers under the mentorship of experienced tutors.

By the end, participants will not only have an in-depth knowledge of periocular oncology (diagnosis and treatment selection), surgical anatomy of the eyelids and periocular area but will also gain expertise in the most commonly used surgical techniques of reconstruction through hands-on practice with cadavers.

LEARNING OBJECTIVES >> KNOWLEDGE AND SKILLS TO DEVELOP

- >> **Comprehend the various tumour types in the periocular region: presentation, differential diagnosis, staging.**
- >> **Select the strategies for treating tumours in the periocular area: surgical or non-surgical interventions.**
- >> **Gain familiarity with the periocular anatomy from a surgical viewpoint.**
- >> **Master planning and implementing various reconstructive techniques specific to the periocular region.**

TARGET AUDIENCE
